

CONVEYORS

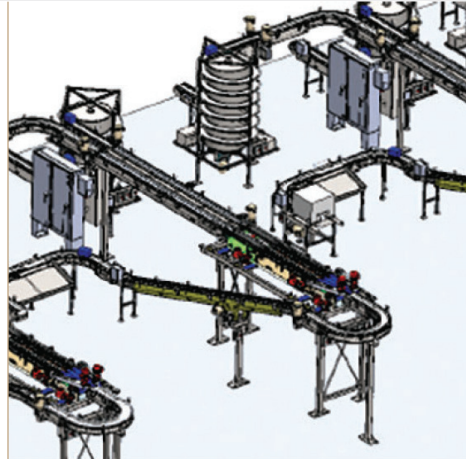

VERT-A-CON

Vertical, sanitary, bucket-free product handling

Same incredible features as our other sanitary process conveyors, plus:

- Space-saving design elevates product to reach hoppers, process equipment on platforms, distribution conveyors, etc.
- Traveling sidewalls protect your product from damage that can occur with standard fixed-guide conveyors.
- Optional features include clean-in-place systems, hopper with metering belt (shown above) and special product release belt surface.

CUSTOM DESIGN CAPABILITIES

Harris has full layout design capabilities to help you maximize your production floor efficiency. We offer:

- SolidWorks software expertise
- Designers on site to develop creative solutions for your precise needs
- Custom equipment design
- Line layout and design
- Plant layout and design

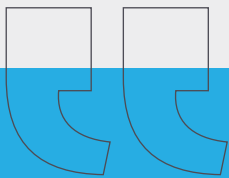

SANITARY PROCESS

Open, accessible cantilever design

Perfect for conveying a myriad of fresh, frozen and cooked products to scales, hoppers, funnels, feeders and other equipment.

- Vegetables
- Nuts
- Pasta
- Fruit
- Cereal
- Spices
- Meat
- Mixes
- Cheese
- Pharmaceuticals
- Popcorn
- Resins
- USDA approved sanitary heavy duty stainless steel design with options for either tubular or round bar frame.
- A key aspect of the unique hygienic design is the infinite TPE belt that includes integrated center drive technology to ensure positive tracking, eliminating the need for any guides or adjustment points.

We promise to creatively solve problems to deliver exceptional customer experiences.

CONVEYORS ENGINEERED FOR YOUR SPECIFIC NEEDS - AND BUILT TO LAST

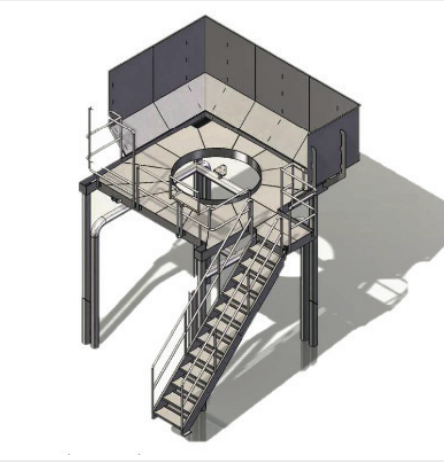

SANITARY SPIRAL

Space-saving elevation maximizes floor space

Original low-tension design. The middle drum moves along with the belt, providing greater throughput than high-tension spirals.

- This unique design allows our spiral to start and stop without a jerking motion, making it perfect for top-heavy products such as boxes and bottles.
- The low-tension design also accommodates a wide variety of product weights and rates.
- Our spiral conveyor has many configuration options: washdown or non-washdown, incline or decline, single lane or dual lane, infeed/discharge orientation of 90°, 180°, 270° or 360°.

DECKS AND STAIRS

Harris offers a variety of decking options. We construct our decking products using stainless steel, aluminum, carbon steel or other composites.

- Design and build capabilities for structural decks and mezzanines
- Easy to assemble
- Ergonomic cleaning platforms
- Easy access to tanks and other machinery for sanitation purposes
- Pivoting platforms and rollaway platforms built by Harris are custom designed for safety and convenience
- Perfect when maintenance and cleaning are needed in hard-to-reach areas

PRODUCT, PACKAGING + CASE HANDLING

- Harris offers a diverse line of tabletop conveyors built to customer specifications.
- Unlimited variety of conveyor configurations used in numerous applications, such as transporting, turning, merging, diverting and accumulating products.
- Perfect for wet or dry product such as candy, granola or protein bars, boxes, cartons, tubs, wrapped products, plastic and glass bottles, cans and much more.

ABOUT HARRIS

Harris designs, builds, controls and maintains plumbing, piping, process piping and HVAC systems for commercial, institutional and industrial customers offering complete design-build and design-assist services for projects that vary in size, scope and complexity. From stadiums and concert halls, to historic landmark buildings, hospitals and industrial facilities, Harris works closely with entire construction project teams and draws on the expertise of a skilled, diverse and dedicated workforce.

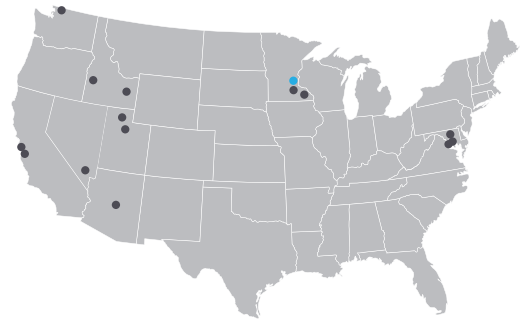

Founded in St. Paul, Minnesota in 1948, Harris has grown to become one of the largest mechanical contractors in the United States with over 2,000 employees in 15 locations throughout the country.

What makes us stand out is more than our national reach, regional presence and local expertise; it's our people—individuals who bring a spirit of creative problem-solving and commitment to excellence to every project, no matter the size, complexity or location.
